## Besafe Inspections

Termites

Thermal Imaging

## Is Your Home Safe?

Did you know that one in three homes in Australia have termites? We did a property inspection on your neighbours house, they know if their property is one of them. You too can be informed if your property is in danger and can take action before it gets worse. We can do inspections of your property using thermal imaging technology for 100% precision in locating termites, water damage and other problems not seen by the eye. No guesswork, accurate reporting and a 48 hour report turnaround.
